DETAILED ACTION

1. It is noted that claims 4-6 are recited as a "system" which does not clearly set forth which statutory category the invention belongs. It has been determined that the claims are directed to an apparatus and the appropriate principles for interpreting claims for that particular category of invention have been applied.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Davis (US 3,127,247).

Regarding claim 4, Davis discloses a reaction system (see Fig. 1), comprising connected in parallel a first reaction compartment (49) and a second reaction compartment (48) being adapted to hold a catalyst (col. 1 lines 35-43) and to receive a reactant stream (see top of Fig. 1), the first compartment being in the form of a reactor tube (cylinder, 8), wherein

a first heat exchange space (38) concentric and spaced apart surrounds the first reaction compartment (see Fig. 1), and the second reaction compartment (48) surrounds a second heat exchange space (38).

Regarding claim 5, Davis, as discussed in claim 4 above, further discloses the the first and second reaction compartment are arranged within a common shell (see Fig. 1).

Regarding claim 6, Davis, as discussed in claim 4 above, further discloses the first and second heat exchange space are formed by a common passage-way (38).
